

Sample Storage & Integrity

Considering the costs involved with drilling and sampling for investigations, the preservation of the sample properties is of fundamental importance for the reliable determination of a material's physical and mechanical characteristic values in laboratory testing.

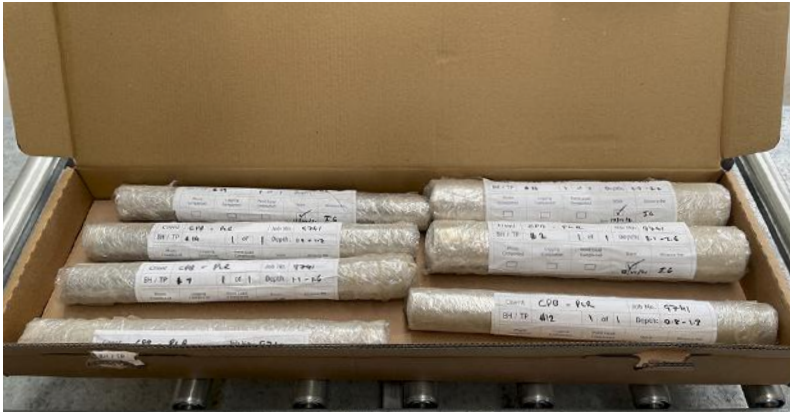

At Alliance, our sample storage preservation solutions considerably minimise drying out that causes irreversible detrimental alteration of the properties of a material for future testing.

We can provide short, medium or long term non-contract storage solutions. Different types of samples may require different storage environments and preservation methods, we can arrange temperature & humidity controlled long term storage environments if required.

Arrange with us to provide sample pickup or bring and coordinate your specialist testing here at Alliance in our sample reception & preparation area. We can also supply bags, buckets, tags, tubes and core trays.

We really are here to help

Sample Storage & Integrity

Pricing List

PRESERVATION OPTIONS		COST/FEE
Core Tray Sample Preservation Options		
Option 1	Place bubble wrap over core. Lid fastened to tray.	Free
Option 2	Place damp hessian over the core. Lid fastened to tray.	Free
